*Mandatory Workplace Safety and Health Programs* Tom LaTourrette,John M. Mendeloff,2008 In 1998, the Occupational Safety and Health Administration (OSHA) began developing a standard that would have required all workplaces to establish a safety and health program. By 1999, it had abandoned its rulemaking process, partly due to intense criticism of the proposed standard. This report assesses the standard and studies of its potential effects, concluding with recommendations should federal or state authorities revisit the initiative.

**Health and Safety Needs of Older Workers** Institute of Medicine,National Research Council,Division of Behavioral and Social Sciences and Education,Board on Behavioral, Cognitive, and Sensory Sciences,Committee on the Health and Safety Needs of Older Workers,2004-03-26 Mirroring a worldwide phenomenon in industrialized nations, the U.S. is experiencing a change in its demographic structure known as population aging. Concern about the aging population tends to focus on the adequacy of Medicare and Social Security, retirement of older Americans, and the need to identify policies,

programs, and strategies that address the health and safety needs of older workers. Older workers differ from their younger counterparts in a variety of physical, psychological, and social factors. Evaluating the extent, causes, and effects of these factors and improving the research and data systems necessary to address the health and safety needs of older workers may significantly impact both their ability to remain in the workforce and their well being in retirement. Health and Safety Needs of Older Workers provides an image of what is currently known about the health and safety needs of older workers and the research needed to encourage social policies that guarantee older workers a meaningful share of the nation's work opportunities.

*A Smarter National Surveillance System for Occupational Safety and Health in the 21st Century* National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Developing a Smarter National Surveillance System for Occupational Safety and Health in the 21st Century, 2018-04-27 The workplace is where 156 million working adults in the United States spend many waking hours, and it has a profound influence on health and well-being. Although some occupations and work-related activities are more hazardous than others and face higher rates of injuries, illness, disease, and fatalities, workers in all occupations face some form of work-related safety and health concerns. Understanding those risks to prevent injury, illness, or even fatal incidents is an important function of society. Occupational safety and health (OSH) surveillance provides the data and analyses needed to understand the relationships between work and injuries and illnesses in order to improve worker safety and health and prevent work-related injuries and illnesses. Information about the circumstances in which workers are injured or made ill on the job and how these patterns change over time is essential to develop effective prevention programs and target future research. The nation needs a robust OSH surveillance system to provide this critical information for informing policy development, guiding educational and regulatory activities, developing safer technologies, and enabling research and prevention strategies that serves and protects all workers. *A Smarter National Surveillance System for Occupational Safety and Health in the 21st Century* provides a comprehensive assessment of the state of OSH surveillance. This report is intended to be useful to federal and state agencies that have an interest in occupational safety and health, but may also be of interest broadly to employers, labor unions and other worker advocacy organizations, the workers' compensation insurance industry, as well as state epidemiologists, academic researchers, and the broader public health community. The recommendations address the strengths and weaknesses of the envisioned system relative to the status quo and both short- and long-term actions and strategies needed to bring about a progressive evolution of the current system.

*Safe Work in the 21st Century* Institute of Medicine, Board on Health Sciences Policy, Committee to Assess Training Needs for Occupational Safety and Health Personnel in the United States, 2000-09-01 Despite many advances, 20 American

workers die each day as a result of occupational injuries. And occupational safety and health (OSH) is becoming even more complex as workers move away from the long-term, fixed-site, employer relationship. This book looks at worker safety in the changing workplace and the challenge of ensuring a supply of top-notch OSH professionals. Recommendations are addressed to federal and state agencies, OSH organizations, educational institutions, employers, unions, and other stakeholders. The committee reviews trends in workforce demographics, the nature of work in the information age, globalization of work, and the revolution in health care delivery—exploring the implications for OSH education and training in the decade ahead. The core professions of OSH (occupational safety, industrial hygiene, and occupational medicine and nursing) and key related roles (employee assistance professional, ergonomist, and occupational health psychologist) are profiled—how many people are in the field, where they work, and what they do. The book reviews in detail the education, training, and education grants available to OSH professionals from public and private sources.

*Nine Elements of a Successful Safety & Health System* John Czerniak, Don Ostrander, 2005

**Worker Safety Under Siege** Vernon Mogensen, 2015-06-11 This eye-opening book shows how the rights of workers to safe and healthful workplaces are under greater attack today than at any time since the passage of the landmark Occupational Safety and Health Act in 1970. This collection is organized around three thematic issues that pose significant challenges to the Occupational Safety and Health Administration's ability to protect workers' safety and health. First, the economy has shifted from an industrial base to a white collar/service base, which includes more women workers than ever before - yet many of the safety and health problems that affect women are not being adequately addressed. Second, free market ideology and globalization have served to undermine worker safety and health laws. And finally, the effects of 9/11 have exacerbated the trend toward weakening workers' rights and safety standards in the name of national security.

**Workplace Safety and Health** U.S. Government Accountability Office, 2017-08-04 OSHA relies on employer injury and illness records to target its enforcement efforts. Questions have been raised as to whether some safety incentive programs and other workplace safety policies may discourage workers' reporting of injuries and illnesses. GAO examined (1) what is known about the effect of workplace safety incentive programs and other workplace safety policies on injury and illness reporting, (2) the prevalence of safety incentive programs as well as other policies that may affect reporting, and (3) actions OSHA has taken to address how safety incentive programs and other policies may affect injury and illness reporting. GAO reviewed academic literature, federal laws, regulations, and OSHA guidance; surveyed a nationally representative sample of manufacturing worksites; and interviewed federal and state occupational safety and health officials, union and employer representatives, and researchers.
